

## 202606 Data Q2.1 API Release - Resolved Cases

09/06/2026

| Release date 18th June 2026    |             |                          |
|--------------------------------|-------------|--------------------------|
| Case fixes 202606 Data release |             |                          |
| Country                        | Case Number | Description of fix       |
|                                |             |                          |
|                                |             |                          |
|                                |             |                          |
|                                |             |                          |
|                                |             | Available from 18th June |
|                                |             |                          |
|                                |             |                          |
|                                |             |                          |

| GDH Case fixes |             |                          |
|----------------|-------------|--------------------------|
| Country        | Case Number | Description of fix       |
|                |             |                          |
|                |             | Available from 18th June |
|                |             |                          |

| API Fixes 2026Q2.1 |                   |                                                                                                                          |
|--------------------|-------------------|--------------------------------------------------------------------------------------------------------------------------|
| Country            | Case Number       | Description of fix                                                                                                       |
| Great Britian      | CAS-170153-K9K7K8 | Improved GB's SubBuilding matching algorithm.                                                                            |
| Viet Nam           | CAS-170460-R6N9Y3 | Fixed a Vietnamese script detection issue to ensure the correct script type in the output format.                        |
| United States      | CAS-170393-M3Y3D8 | Fixed an issue where full-form US AdministrativeArea input resulted in incorrect values when the parsing process failed. |
| ALL                | CAS-170204-B7H8H7 | Enhanced the parsing priority algorithm to improve matching of input Locality against reference data.                    |
| ALL                | CAS-174337-L6K8C7 | Fixed Verify Engine's *Search process crash issue.                                                                       |
