Country Rebuilds / Major Improvements

Countries below have notable changes that go beyond just a normal refresh. Details are provided below.

ISO2	Country	Remarks																						
KR	Korea	Administrative Area Updates (Jeonnam-Gwangju) Following the merger of Gwangju and Jeollanam-do into the Jeonnam-Gwangju, which officially took effect on July 1, 2026, our data have been updated with the following Administrative Area changes: AdministrativeArea Name Changes: Regional records and fields are updated to the unified name Jeonnam-Gwangju. Legacy Codes Removed: Old codes (KR-29 and KR-46) are deprecated and will no longer be returned. ISO 3166-2 Codes Unavailable: A unified ISO code is currently unavailable and will not be provided until officially assigned by the ISO.																						
PL	Poland	2 Important Changes a. Change in geographic hierarchy b. Addition of Residential/Commercial flags (ResCom) <u>Details:</u> a. Updated the Polish geographic hierarchy as follows: Previous hierarchy <table><tr><th>Local name</th><th>Verify Field</th></tr><tr><td>Voivodeship</td><td>AdministrativeArea</td></tr><tr><td>County</td><td>SubAdministrativeArea</td></tr><tr><td>Commune/Locality</td><td>DependentLocality</td></tr></table> New hierarchy <table><tr><th>Local name</th><th>Verify Field</th></tr><tr><td>Voivodeship</td><td>AdministrativeArea</td></tr><tr><td>County</td><td>removed</td></tr><tr><td>Commune</td><td>SubAdministrativeArea (replacing County).</td></tr><tr><td>Town</td><td>Locality</td></tr><tr><td>Sub-town</td><td>DependentLocality</td></tr><tr><td>Locality</td><td>(new) DoubleDependentLocality</td></tr></table> b. Added ResCom (Residential / Commercial) flag indicators. Requires ‘Enhanced’ Option to be set.	Local name	Verify Field	Voivodeship	AdministrativeArea	County	SubAdministrativeArea	Commune/Locality	DependentLocality	Local name	Verify Field	Voivodeship	AdministrativeArea	County	removed	Commune	SubAdministrativeArea (replacing County). BR	Brazil	Capped/Removed very large premise ranges. Brazilian address records carried premise "ranges" with sentinel terminators — 1%99999, 1198*99998, 1*46428441 — where the terminator encodes Correios' "<i>ao fim</i>" (to the end of the street) rather than a real upper bound. This causes almost <i>any</i> premise being verified even though it may not exist, causing false-positive verifications and count inflation. We have capped these large ranges to the highest known real point premise observed on the same street section. Large ranges with no known point premises are removed to avoid false positives.
PH	Philippines	Added NewToolList with Reflex on for Philippines in country.txt to improve Verify match rate.
MT	Malta	We use a new supplier for Malta addresses which results in now supporting 7-digit postal codes instead of 3-digit. Premise verification has also improved with this rebuild.
